

What is ethanol?

- Ethanol is an advanced, homegrown biofuel that's already in 97 percent of U.S. gasoline and is moving America forward every day.

What is E15?

- E15 is gasoline blended with 15 percent ethanol – it is just a little more than what your car is already running on. Drivers across the country have a better, more affordable choice at the pump with E15.
 - Consumers have driven more than 750 million, worry-free miles using E15.
-

What you put in your car matters.
Choose E15.

E15 is good for your engine, environment & wallet

Good for your engine:

- E15 is a high-performance fuel that burns cleaner and cooler than regular gasoline.
- Any car 2001 or newer can benefit from using E15.
- NASCAR mechanics, automakers and regulators all agree
 - E15 is a safe, affordable, greener choice for engines.

Good for our environment:

- Ethanol replaces toxic chemicals in gasoline known to cause cancer and smog.
- Ethanol is an earth-friendly biofuel that decreases greenhouse gas emissions.

Good for your wallet:

- Ethanol keeps the prices at the pump lower.
- Ethanol supports nearly 400,000 high-tech, American jobs, and moving to E15 will create another 136,000.
